

# heavy | mate<sup>®</sup>

## Heavy Duty Connectors

# Note from the CEO

## Ladies and Gentlemen,

For over 75 years Amphenol has enjoyed success as the interconnection technology provider of choice to industry-leading companies around the world. One of our key strategic areas of focus has been and is the Industrial market. Our organization works with leading manufacturers across a wide range of applications - including Energy Generation & Distribution, Transportation, Heavy Equipment, Factory Automation, Wireless Outdoor, ChipCard Readers - enabling smarter, faster and better technologies to connect products to customer solutions.

The Industrial market footprint of Amphenol covers over facilities in more than 12 different European countries and more than 30 countries worldwide. Our successful expansion into new regions as well as new industrial applications is a direct reflection of our agile, entrepreneurial management team and our unwavering commitment to execute Amphenol's strategies for the benefit of our customers, shareholders and employees.

Thank you for partnering with Amphenol. Our entire organization is at your service.

A handwritten signature in black ink, appearing to read 'R. Adam Norwitt'. The signature is fluid and cursive, with a long horizontal stroke at the end.

R. Adam Norwitt  
President and CEO, Amphenol Corporation

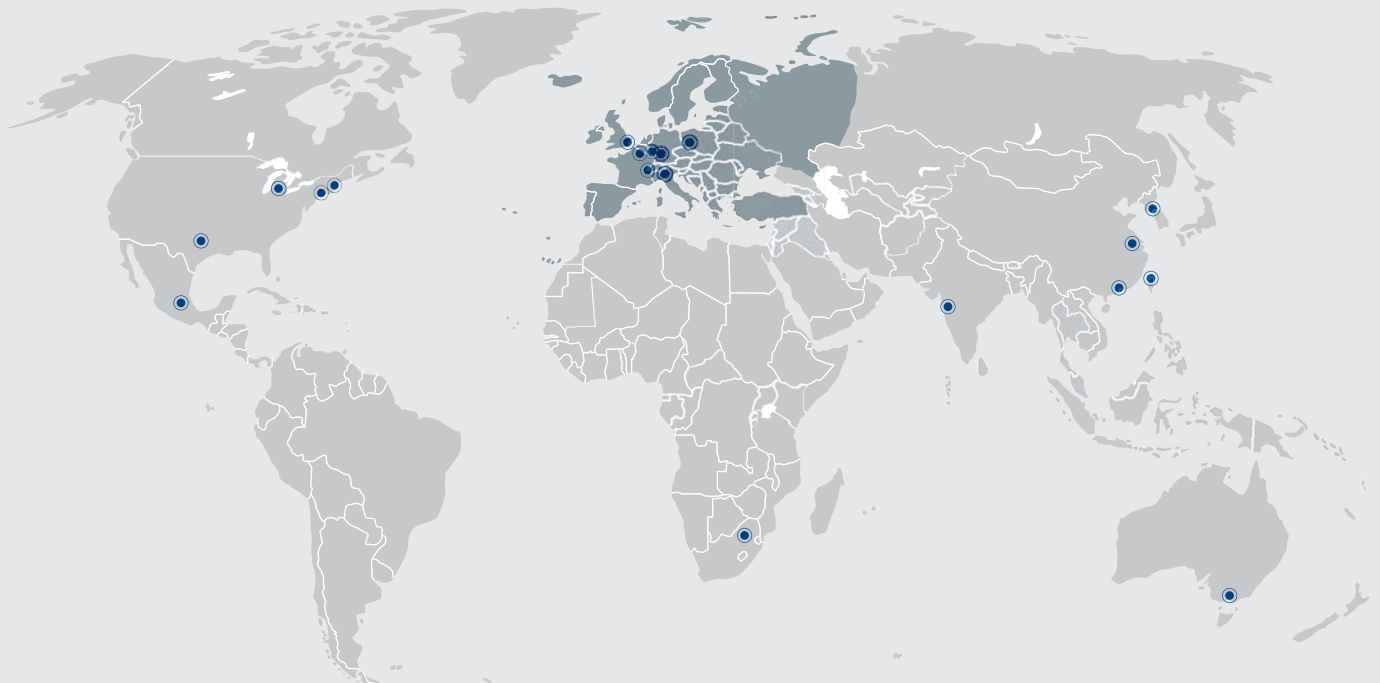

# Make use of the best

## Use our global resources

“Think global, act local!” Independently from where you are in Europe, we offer you our global expertise and great variety of products and technologies. And in comfort with your personal contact. Our numerous European offices are your access to our global resources.

### ● OUR OFFICES IN EUROPE AND WORLDWIDE

FRANCE	CHINA	AUSTRALIA	SOUTH AFRICA
GERMANY	KOREA	MEXICO	INDIA
UNITED KINGDOM	TAIWAN	USA	ITALY

SECURITY, RELIABILITY AND COMFORTABLE SERVICE FROM ONE SOURCE.

# More time for important things: benefit from our service and diversity

Enjoy security, reliability and comfortable service from one source. INDUSTRIAL@AMPHENOL offers one of the most individual and most diversified service programmes in the market – exclusively for industrial customers. Access all possibilities of the Amphenol group through your personal expert adviser.

## WIDE PRODUCT RANGE

Take advantage of a choice of Amphenol products. Our broad product portfolio offers individual solutions from more than 85 member companies in the global Amphenol group.

## EXCLUSIVENESS AND FLEXIBILITY

One face to the customer: every inquiry is handled on an individual service level by your personal key account service partner. This ensures maximum transparency and best-in-class flexibility in the whole process.

## QUALITY

Interconnect systems need reliability, speed and flawless data transmission. We continuously test and guarantee the required standard in our products – and also in our personal services.

## INDIVIDUAL SOLUTIONS

Your project requires an individual solution that is not available off-the-shelf? As your think tank and discussion partner we provide engineering support and solution-oriented development for your tailor-made Amphenol product.

## SPEED AND AVAILABILITY

Smart and intelligent processes are the secret behind our service programme. Flexible planning and distribution, perfect logistics and highest availability are our key factors for best customer service.

## GLOBAL KEY ACCOUNT SERVICE

Our key account service is your individual entrance to global know-how, products and services. More than 85 Amphenol companies around the world offer an extensive range of technologies and products. We offer access to our worldwide resources through one individual contact person.

# heavy | mate<sup>®</sup> is a Modular Metal Connector Line

## What is heavy | mate<sup>®</sup> ?

heavy | mate<sup>®</sup> is a modular connector line, consisting of:

- Hoods & Housings
- Inserts
- Contacts

## Why heavy | mate<sup>®</sup> ?

- Connections in harsh industrial environment
- Robust design necessary
- High number of poles or different kinds of signals transmitted
- Very good EMC protection required
- Power and signal transmission outdoor
- Very safe locking system required

# for Applications in Industrial Environments.

## Major product features

- Hybrid interconnections
- Good costs
- Voltage up to 1000V
- VDE, UL, CSA approvals
- Vibration proof
- High current
- Signal transmission
- High pole sizes
- IP65 to IP68
- Corrosion resistance
- Robust

## What can heavy | mate<sup>®</sup> offer?

- Connectors for industrial applications indoor & outdoor
- A wide range of inserts for signal and power transmission
- A large variety in pole sizes from 3 up to 280 poles per connector
- Current ratings up to 250A per contacts and voltages up to 1000V
- A modular connector system to configure customized solutions

# How to select a solution with series heavy | mate®.

## Theory

- Select an insert that meets your requirements.
- Choose the related contacts if not included in inserts.
- Choose related housings.
- Choose related cable gland.
- If you are interested in a cable assembly, please ask us.

## Practice 1

### Requirements

- 250V
- 5A
- 60 contacts
- Termination: crimp

### Solution

- Check: Make a pre-selection on the overview page of the series, s. p. 10/11  
Possible series: heavy | mate® D, DD and M
- Check: Details on the overview pages of the sub-series, see pages 22, 38, 126  
All 3 variants are possible; Selection heavy | mate® D
- Check: Contact inserts on the detail page of the sub-series  
Selection: C146 10A064 000 2
- Check: Contacts on the same double page  
Selection: VN01 016 0002 1
- Check: Housings via crosslink at contact inserts  
Selection: C146 21R024 600 8
- Check: Gland bushing via crosslink at housings  
Selection: VN16 320 0126X

## Practice 2

### Requirements

- 3 x 400V; 50A; 6mm<sup>2</sup> wire gauge
- 8 x 250V; 8A; 1.5mm<sup>2</sup> wire gauge
- 5 x 400V; 15A; 4mm<sup>2</sup> wire gauge

### Solution

- **Check:** Make a pre-selection on the overview page of the series, see pages 10/11  
Possible series: heavy | [mate® M](#)
- **Check:** How 16 contacts can be realized, see modules overview on page 130  
Possible selection: a) 1 x 20 contacts  
b) 2 x 10 contacts  
c) 1 x 10 contacts + 2 x 5 contacts  
d) 1 x 3 contacts + 1 x 5 contacts + 1 x 10 contacts
- **Check:** Technical parameters / solution, see detail pages of the modules on page 138  
Possible selection: a) not possible due to voltage  
b) not possible due to voltage  
c) not possible due to current  
d) POSSIBLE
- **Check:** Choose matching contact, see detail page of the modules on page 138  
Possible selection: a) C146 A03 001 E8 - VN01 036 0002 1C  
b) C146 A05 001 E8 - VN01 025 0033 1C  
c) C146 A10 001 E8 - VN01 016 0027 1C
- **Check:** Choose matching frame, see frames on page 136  
Solution: C146 P10 001 G8
- **Check:** Choose matching housing, see housings on page 184  
Solution: C146 21R010 600 8

# The highlights of the series heavy|mate®.

## Contact technology

- Turned contacts, which correspond to the market standard.
- Turned female contacts of copper for higher current-carrying capacity – specifically for the modular system heavy|mate® M.
- Radsok contact technology: These are laminated contacts with very low transition resistance, suitable for high current applications.
- Stamped contacts with high performance for semi-automatic processing at great cost savings.
- Selectively coated gold plating stamped contacts offer great savings.

## Housings

Surface coatings available in two versions: Standard or High-End with a salt mist resistance up to 500 hours.

Flexible cable entry in different positions – possible on request.

Robust metal levers in 1 and 2 locking-lever-system.

Quality EMC solutions.

Tightness classes in IP65, IP67 or IP68!

## Modular system

With the new series heavy |mate® F Amphenol offers a new modular system that is compatible with the market leader. With the series heavy |mate® M Amphenol offers a system with many benefits:

- More module slots in the connector.
- Large selection of contact-safe male contacts
- Stamped contacts and the Radsok contact technology
- Great cost savings potential

The background of the advertisement is a dynamic industrial scene. In the upper portion, a close-up of a mechanical assembly is visible, featuring a pressure gauge with a green face and a blue needle, and several hexagonal bolts. The lower portion is dominated by a shower of bright orange and yellow sparks falling from a dark, metallic surface, likely a grinding or cutting operation. The overall lighting is dramatic, with deep blues and purples in the shadows and bright, warm colors from the sparks and machinery.

# heavy | mate<sup>®</sup> A

- Rated voltage 250 / 400 V
- Rated current 14 A ... 18 A
- Termination: screw
- Number of contacts: 3, 4, 10, 16, 32

Approvals, Testhouse	Characteristics	Approval-Number
SEV 	250 V, 10 A	
UL 	600 V, 14 A	E 63093
CSA 	600 V, 10 A; 16 A; 20 A	LR 700721

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

## General information

- For series heavy|mate® A connectors may be engaged or disengaged when live but without electrical load. If these connectors are used as plug and socket device, the load shall be reduced to 10 % of the rated current.
- Low and high profile housing for heavy|mate® A series inserts for 10 and 16 contacts.

## No standard for this series, but:

- Interchangeable with other makes
  - contact insert to contact insert
  - contact insert to housing 10 ,16 contacts

Housings are designed according to DIN EN 175 301 - 801

## First-to-mate last-to-break protective ground contact

## heavy | mate<sup>®</sup> D

- Rated voltage 250 V
- Rated current 10 A ... 16 A
- Termination: crimp
- Number of contacts: 7, 15, 25, 40, 50, 64, 128

Approvals, Testhouse	Characteristics	Approval-Number
SEV 	250 V, 10 A	
UL 	600 V, 14 A 600 V, 15 A (high current)	E 63093
CSA 	600 V, 10 A	48932

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

**General information**

- Contact inserts without crimp contacts, crimping tools see separate catalogue „Tools“.
- Contacts must be ordered separately, processing instructions see catalogue „Tools“.
- We recommend using the high profile housings / hoods for the heavy|mate® D inserts.
- Connectors series heavy|mate® D may be engaged or disengaged when live but without electrical load.  
If these connectors are mated or unmated under load, the load shall be reduced to 10 % of the rated current.
- For contact inserts for turned contacts, guide pins and guide socket are recommended (see page 256).
- By using contact inserts with two PE-connections without hoods, it is necessary to connect the facing of each PE-connection.
- If connectors are mounted in non conductive housings both protective earthing terminals shall be mounted.

**Standardised connectors according to DIN EN 175 301 - 801 (DIN 43652)**

Interchangeable with all other products which are according to the standard.

- a) Contact insert to contact insert 15, 25, 40, 64 way.
- b) Contact insert to housing 15, 25, 40, 64 way.

**High protection against mismatching**

- Female inserts with funnel shaped contact entry avoids mismatching with stamped contacts.

**First-to-mate last-to-break protective ground contact**

**Contact inserts for stamped contacts and for turned contacts**

A high-speed train, silver with orange and black accents, is shown from a front-quarter perspective on a track. The train is moving towards the viewer. Above the train, a complex network of overhead power lines and support poles is visible, extending into the distance. The background consists of green trees and a clear sky. The train's front features a large windshield, headlights, and a nose cone. The tracks are made of steel rails on a gravel bed.

# heavy | mate<sup>®</sup> DD

- Rated voltage 250 V
- Rated current 8 A ... 9 A
- Termination: crimp
- Number of contacts: 24, 42, 72, 108

Approvals, Testhouse	Characteristics	Approval-Number

## heavy | mate<sup>®</sup> E

- Rated voltage 500 V
- Rated current 16 A ... 22 A
- Termination: screw, crimp, tension spring
- Numbers of contacts: 6, 10, 16, 24, 48

Approvals, Testhouse	Characteristics	Approval-Number
SEV	400 V, 16 A	
UL	600 V, 16 A	E 63093
CSA	600 V, 16 A	48932

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

## General information

- Contact inserts without crimp contacts.
- Connectors series heavy|mate® E may be engaged or disengaged when live but without electrical load. If these connectors are mated or unmated under load, the load shall be reduced to 10 % of the rated current.
- Crimping tools and processing instructions see separate catalogue „Tools“.
- Low and high profile housings are usable.
- If wire ferrule are used, screw terminals without wire protection are preferred.

## No standard for this series, but:

Interchangeable with other products

- a) contact insert to contact insert 6, 10, 16, 24 contacts
- b) contact insert to housing 6, 10, 16, 24 contacts

Housings are designed according to DIN EN 175 301 - 801

## First-to-mate last-to-break protective ground contact

## Contact inserts for screw termination, screw termination with wire protection and for crimp termination

The image shows a large industrial facility with a high ceiling, steel beams, and overhead lighting. In the foreground, a white industrial machine is partially visible, with a semi-transparent white box overlaid on it containing text. In the background, there are several large green and yellow machines, likely part of a production line, and a blue overhead crane system. The floor is concrete with yellow safety markings.

# heavy | mate<sup>®</sup> E / FE / KO

- Rated voltage 400 V
- Material contacts: iron-constantan
- Rated current 10 A
- Number of contacts: 6, 10, 16, 24

**Connectors with iron (FE) and constantan (CO) contacts**

are basically used in measuring and control circuits to serve as interface between FE/CO thermocouples and control unit, i. e. temperature control of moulds in injection moulding machines. Through the use of FE/CO connectors in the thermocouple circuit the measuring results are more accurate, thus the tolerance of the temperature control is much narrower.

Amphenol's Industrial Connectors with iron (FE) an Contantan (CO) contacts are used to connect FE/CO thermocouples with electronic signal amplifiers in measuring and control circuits, i. e. for temperature control of moulding machines.

**Errors with various combinations**

The connection of unlike metals (FE/Brass and CO/Brass) generate thermoelectric voltage errors in the mesuring circuit caused by the flow from iron wire to the brass contact or by temperature changes at the contact elements.

Nominal Temp.	Contact Material	without Thermo Contacts		with Thermo Contacts	
		MS/FE	MS/KO	FE/FE	KO/KO
100 °C		+ 4 %	- 16 %	- 4 %	- 2 %
200 °C		+ 2.5 %	- 8 %	- 3 %	- 1.5 %
300 °C		+ 1.3 %	- 12.7 %	- 1.3 %	0 %
400 °C		+ 1.5 %	- 4.5 %	- 1.0 %	0 %

By using FE/CO contacts respectively these deviations will be minimized.

**Material / Temperature Range**

Temperatur range	Material/measurement procedure
< 150 °C	any/Resistance measurement
150 °C - 450 °C	FE-CO (iron/Constantan)
450 °C - approx. 1000 °C	Ni/Cr-Ni (Nickel/Chrome/Nickel)

**Temperature changes cause errors**

# heavy | mate<sup>®</sup> F

- Modular connector
- Compatible with market standard
- Rated voltage up to 1000 V
- Rated current up to 100 A
- Termination: crimp
- Numbers of contacts: 2 - 102

Approvals, Testhouse	Characteristics	Approval-Number
UL 	in preparation	in preparation
CSA 	in preparation	in preparation

## General information

- Modules inserts without crimp contacts, crimping tools see separate catalogue “Tools”.
- Contacts must be ordered separately, processing instructions see catalogue “Tools”.
- Connectors series heavy|mate® F may be engaged or disengaged when live but without electrical load.  
If these connectors are mated or unmated under load, the load shall be reduced to 10 % of rated current.
- We recommend using the high profile housings / hoods for the heavy|mate® F inserts.
- Empty modul spaces have to be filled with blind modules.
- Torque for PE connection 1.2 Nm

## Advantages of the system

- No standard but interchangeable with competitive products.
- Housings are designed according to DIN EN 175 301 801
- Simply connecting of the modules and frames.

## First-to-mate last-to-break protective ground contact

## Range of housings

Size E6

Size E10

Size E16

Size E24

Size E48

### Requirements

- 3 x 400V; 50A; 6mm<sup>2</sup> wire gauge
- 8 x 250V; 8A; 1.5mm<sup>2</sup> wire gauge
- 5 x 400V; 15A; 4mm<sup>2</sup> wire gauge

### Solution

#### 1. Check how 16 contacts can be realized; see modules overview on page 78

Possible selection:

- a) 1 x 17 contacts
- b) 2 x 12 contacts
- c) 1 x 6 contacts + 1 x 12 contacts
- d) 1 x 3 contacts + 1 x 6 contacts + 1 x 12 contacts

#### 2. Check technical parameters / solution, see detail pages of the modules from page 84

Possible selection:

- a) not possible due to voltage
- b) not possible due to voltage
- c) not possible due to current
- d) POSSIBLE

#### 3. Choose matching contact, see detail page of the modules on page 84

Possible selection:

- a) 3 contacts = C146 10A003 500 15 → contacts = VN01 040 0013 1C
- b) 6 contacts = C146 10A006 500 15 → contacts = VN01 025 0039 1C
- c) 12 contacts = C146 10A012 500 15 → contacts = VN01 016 0027 1C

#### 4. Choose matching frame, see frames on page 82

Solution: C146 10P10 000 15

#### 5. Choose matching housing, see housings on page 184

Solution: C146 21R010 600 8

## heavy|mate® F Characteristics 2 contacts high current module

General Characteristics	Standard	Value
Number of contacts		2
Termination technique		crimp
Wire Gauge		10 – 35 mm <sup>2</sup> (AWG 8-2)
Flammability	UL94	V-0
Elektrische Kennwerte		
Rated voltage	IEC 60664-1	1000 V
Pollution degree	IEC 60664-1	3
Installation (overvoltage) category	IEC 60664-1	III
Material group	IEC 60664-1	II (PA)
Rated impulse withstand voltage	IEC 60664-1	8 kV
Current carrying capacity	IEC 60512-5-2	see derating curves
Contact resistance	IEC 60512-2-1	≤ 5 mΩ
Insulation resistance	IEC 60512-3-1	≥ 10 <sup>12</sup> Ω
Climatical Characteristics		
Climatic category	IEC 60068-1	40/125/21
Upper temperature	IEC 60512-11-9	+125°C
Lower temperature	IEC 60512-11-10	-40°C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥500 mating cycles
IP-degree of protection	IEC 60529	IP00 (pin insert) / IP20 (socket insert)
Materials		
Module		PA6.6 GF
Colour module		black
Contact		CuZn (brass)
Contact plating		Ag (silver)

## heavy|mate® F Characteristics 3 contacts module

General Characteristics	Standard	Value
Number of contacts		3
Termination technique		crimp
Wire Gauge		1.5 - 6.0 mm <sup>2</sup> (AWG 16-10)
Flammability	UL94	V-0
Electrical Characteristics		
Rated voltage	IEC 60664-1	400 V (conductor - earth) 690 V (conductor - conductor)
Pollution degree	IEC 60664-1	3
Installation (overvoltage) category	IEC 60664-1	III
Material group	IEC 60664-1	II (PA)
Rated impulse withstand voltage	IEC 60664-1	6 kV
Current carrying capacity	IEC 60512-5-2	see derating curves
Contact resistance	IEC 60512-2-1	≤ 5 mΩ
Insulation resistance	IEC 60512-3-1	≥ 10 <sup>10</sup> Ω
Climatical Characteristics		
Climatic category	IEC 60068-1	40/125/21
Upper temperature	IEC 60512-11-9	+125°C
Lower temperature	IEC 60512-11-10	-40°C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥500 mating cycles
IP-degree of protection	IEC 60529	IP00 (pin insert) / IP20 (socket insert)
Materials		
Module		PA6.6 GF
Colour module		black
Contact		CuZn (brass)
Contact plating		Ag (silver) / Au (gold)

Modules with centering function allow the use of the modular system in rack and panel applications without housing. The modules align a floating frame so that modules can be plugged centred. For optimal function two modules must be used in the frame.

The image shows a large industrial testing chamber, the heavy | mate<sup>®</sup> HSE, in a factory or laboratory setting. The chamber is constructed from blue-painted metal frames and glass panels. A computer monitor is mounted on the front panel, displaying a software interface. To the right, a control panel with a keypad and a small screen is visible. The chamber is situated on a grey metal floor with yellow safety lines. The background shows industrial infrastructure, including pipes and ceiling lights.

## heavy | mate<sup>®</sup> HvE

- Rated voltage 660 V
- Rated current 16 A ... 22 A
- Termination: screw
- 2 delayed mating contacts
- Number of contacts: 3, 6, 10, 16, 20, 26, 32

Approvals, Testhouse	Characteristics	Approval-Number
UL 	600 V, 16 A	E 63093
CSA 	600 V, 16 A	48932

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

### Construction of connectors Type HVE

The connectors of series heavy|mate® HVE are based on series heavy|mate® E with the following deviations:

#### Inserts

The HVE-inserts with 3, 6 and 10 contacts are basically the same as the 10, 16 and 24-contacts inserts of series heavy|mate® E. However they are only partly loaded with contacts and have two delayed mating pilot duty contacts.

Only type 16 HVE has special inserts with a different contact arrangement. The mounting dimensions are however identical with the 24 contacts version of heavy|mate® E.

The delayed mating contacts are intended for switching a relay coil for electrically locking in order to have unloaded socket contacts in an unmated condition.

If connectors without breaking capacity are used as connectors with breaking capacity the electrical power data must be reduced in accordance with the manufacturer's specification. These specifications are available from the manufacturer.

heavy|mate® E inserts with pin contacts are not intermatable with heavy|mate® HVE inserts with socket contacts due to

- two empty contact holes are closed at 3, 6 and 10 contact inserts.
- the 16 contacts HVE insert has a different contact arrangement.

#### Housings: (made of aluminium)

heavy|mate® E housings with an inside insulation (plastic foil) are used for the 16-contacts insert.

The inside barriers at the narrow sides preventing mounting of 660 V-inserts in 400 V housings are removed and the 16-contacts insert is now mountable.

#### No standard for this series, but:

Intermateable and exchangeable with other makes

- Contact insert to contact insert
- Contact insert to housing 6, 10, 16, 24 pin

Housings are designed according to DIN EN 175 301-801

#### First-to-mate last-to-break protective ground contact

## heavy|mate® K Characteristics contact inserts 4 / 8 + PE

General Characteristics	Standard	Value
Number of contacts		4/8 + PE
Termination technique		schrauben
Wire gauge		1.5 - 16mm <sup>2</sup> (AWG 16-6)
Flammability	UL94	V-0
Electrical Characteristics		
Rated voltage	IEC 60664-1	400V / 400V
Pollution degree	IEC 60664-1	3
Installation (overvoltage) category	IEC 60664-1	3
Material group	IEC 60664-1	3b
Rated impulse withstand voltage	IEC 60664-1	8,0 kV
Current carrying capacity	IEC 60512-5-2	see derating curves
Contact resistance	IEC 60512-2-1	≤ 5 mΩ
Insulation resistance	IEC 60512-3-1	≥ 10 <sup>12</sup> Ω
Climatical Characteristics		
Climatic category	IEC 60068-1	40 / 125 / 21
Upper temperature	IEC 60512-11-9	125°C
Lower temperature	IEC 60512-11-10	-40°C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥500 mating cycles
Materials		
Insert		PC
Colour insert		grey
Contacts		Cu-alloy
Contact plating		Ag (silver)

### Derating Curves

Curve	Wire gauge
a	10 mm <sup>2</sup>
b	16 mm <sup>2</sup>

# heavy | mate<sup>®</sup> M

- Modular connector
- More module slots than heavy | mate<sup>®</sup> F and market standard
- Rated voltage 63 - 1000 V
- Rated current 5 A ... 250 A
- Termination: crimp

Approvals, Testhouse	Characteristics	Approval-Number
VDE 	Characteristics see rated voltage and rated current of each module	56 79 ÜG
SEV 		
UL 		E 63093
CSA 		48932

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

## heavy|mate® M General information

### General information

- Modules inserts without crimp contacts, crimping tools see separate catalogue “Tools”.
- Contacts must be ordered separately, processing instructions see catalogue “Tools”.
- Connectors series heavy|mate® M may be engaged or disengaged when live but without electrical load.  
If these connectors are mated or unmated under load, the load shall be reduced to 10 % of rated current.
- We recommend using the high profile housings / hoods for the heavy|mate® M inserts.
- Empty modul spaces have to be filled with blind modules.
- Torque for PE connection 1.8 Nm

### Advantages of the system

- High combination possibilities
- Possibility of inverse configuration
- Rated voltage up to 1000 V
- Low cost

### First-to-mate last-to-break protective ground contact

Minimum wire size 0.5 mm<sup>2</sup>

### Modules

### Frames

### Range of housings

### Requirements

- 3 x 400V; 50A; 6mm<sup>2</sup> wire gauge
- 8 x 250V; 8A; 1.5mm<sup>2</sup> wire gauge
- 5 x 400V; 15A; 4mm<sup>2</sup> wire gauge

### Solution

#### 1. Check how 16 contacts can be realized; see modules overview on page 130

Possible selection:

- a) 1 x 20 contacts
- b) 2 x 10 contacts
- c) 1 x 10 contacts+ 2 x 5 contacts
- d) 1 x 3 contacts + 1 x 5 contacts + 1 x 10 contacts

#### 2. Check technical parameters / solution, see detail pages of the modules on page 138

Possible selection:

- a) not possible due to voltage
- b) not possible due to voltage
- c) not possible due to current
- d) POSSIBLE

#### 3. Choose matching contact, see detail page of the modules on page 138

Possible selection:

- a) 3 contacts = C146 A03 001 E8 → contacts = VN01 036 0002 1C
- b) 5 contacts = C146 A05 001 E8 → contacts = VN01 025 0033 1C
- c) 10 contacts = C146 A10 001 E8 → contacts = VN01 016 0027 1C

#### 4. Choose matching frame, see frames on page 136

Solution: C146 P10 001 G8

#### 5. Choose matching housing, see housings from page 184

Solution: C146 21R010 600 8

## heavy|mate® M Characteristics 1 contact module

General Characteristics	Standard	Value
Number of contacts		1
Termination technique		crimp
Wire gauge		50 / 70 / 95 mm <sup>2</sup> (AWG 1/00/000)
Flammability	UL94	V-0
Electrical Characteristics		
Rated voltage	IEC 60664-1	1000 V
Pollution degree	IEC 60664-1	3
Installation (overvoltage) category	IEC 60664-1	3
Material group	IEC 60664-1	2
Rated impulse withstand voltage	IEC 60664-1	8.0 kV
Current carrying capacity	IEC 60512-5-2	see derating curves
Contact resistance	IEC 60512-2-1	≤ 1 mΩ
Insulation resistance	IEC 60512-3-1	≥ 10 <sup>10</sup> Ω
Climatical Characteristics		
Climatic category	IEC 60068-1	40 / 125 / 21
Upper temperature	IEC 60512-11-9	125°C
Lower temperature	IEC 60512-11-10	-40°C
Mechanical Characteristics		
IP-degree of protection	IEC 60529	20
Mechanical operation	IEC 60512-9-1	≥ 500 mating cycles
Materials		
Module		PA 6.6 GF
Colour module		black
Contacts		Cu-alloy
Contact plating		Ag (silver)

### Derating Curves

### General requirements

- Due to reduced cross sections at PE contacts of frames, the PE contact has to be additionally protected against short circuits by using a protection circuit offering a sufficiently short breaking time (<0.25s).
- Parts to be used as connectors, not as plug devices (connector with breaking capacity). Do not mate under current or voltage!

## Brief information

- For integration of standard RJ45 components
- Worldwide real-time access on machines and facilities
- Easy assembly through the use of standard RJ45 components
- One connector for power, signal and data transmission
- 4 additional power crimp contacts
- Time- and money saving through the use of similar active- and passive components
- Unitary transmission protocol in the office- and production environment.
- Meets CAT 5 for Ethernet acc. ISO/IEC 11801, suitable for 10/100/1000 Mbps transfer rate

General Characteristics	Standard	Value module	Value RJ45
Number of contacts		4	8
Termination technique		crimp	mate
Wire gauge		0.14 - 2.5mm <sup>2</sup>	
Flammability	UL 94	V-0	V - 0
Electrical Characteristics			
Rated voltage	IEC 60664-1	400 V AC	125 V AC
Rated impulse withstand voltage	IEC 60664-1	6 kV	1.8 kV
Current carrying capacity	IEC 60512-5-2	13 A <sup>1)</sup>	1.5 A
Contact resistance	IEC 60512-2-1	≤ 5 mΩ	≤ 20 mΩ
Insulation resistance	IEC 60512-3-1	10 <sup>10</sup> Ω	5 <sup>8</sup> Ω
Climatical Characteristics			
Upper temperature	IEC 60512-11-9	+ 100 °C	+ 80 °C
Lower temperature	IEC 60512-11-10		- 20 °C
Mechanical Characteristics			
Mechanical operation	IEC 60512-9-1	≥ 500 mating cycles	≥ 500 mating cycles
Materials			
Module		PA 6.6 GF	
Colour module		black	black
Male contacts		CuZn (brass)	CuSn (bronze)
Female contacts		CuZn (brass)	CuSn (bronze)
Contact plating		Ag (silver)	Au (gold)

## Brief information

- Power, signal and pneumatic within a single connector
- Very stable brass contacts
- Pneumatic socket contacts with barrier, closes when the connector is open
- Available with single or double connections
- Connection for 2.5 mm or 4 mm PTFE (Teflon)-tubes
- Tubes can be disassembled from the terminations

General Characteristics	Standard	Value
Number of contacts		1 / 2
Termination technique		tube termination
Wire gauge		2.5 mm / 4.0 mm
Flammability	UL 94	V-0
Technical Characteristics		
Operating pressure		8 bar with PTFE tube
Operating path		4.0 mm
Locking		locking on one side
Pneumatic tube		only use PTFE tubes <sup>1)</sup>
Climatical Characteristics		
Upper temperature		+100 °C
Lower temperature		- 20 °C
Mechanical Characteristics		
Mechanical operation		5000 mating cycles
Materials		
Module		PA 6.6 GF
Colour module		black
Contacts		Brass MS 58

## heavy|mate® Q Characteristics contact inserts 17 + PE

General Characteristics	Standard	Value
Number of contacts		17 + PE
Termination technique		crimp
Wire gauge		0.14 – 2.5 mm <sup>2</sup> (AWG 26-14)
Flammability	UL94	V-0
Electrical Characteristics		
Rated voltage	IEC 60664-1	250 V
Pollution degree	IEC 60664-1	3
Installation (overvoltage) category	IEC 60664-1	3
Material group	IEC 60664-1	3b
Rated impulse withstand voltage	IEC 60664-1	4 kV
Current carrying capacity	IEC 60512-5-2	see derating curves
Contact resistance	IEC 60512-2-1	≤ 5 mΩ
Insulation resistance	IEC 60512-3-1	≥ 10 <sup>12</sup> Ω
Climatical Characteristics		
Climatic category	IEC 60068-1	40/125/21
Upper temperature	IEC 60512-11-9	+125°C
Lower temperature	IEC 60512-11-10	-40°C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥ 500 mating cycles
Materials		
Insert		PC
Colour insert		grey
Contacts		Cu-alloy
Contact plating		Ag (silver) / Au (gold)

# heavy | mate<sup>®</sup> Housings

## Available Types

- **Standard-Housings IP65** see page 184
- **Housings in IP67** see page 222
- **Housings in IP68** see page 228
- **EMC-Housings** see page 236
- **Corrosion resistant Housings** see page 244

#### General information

- The connectors of our heavy|mate® series are designed for use in machine tools, general electric installations and applications as well as for industrial control and other electrical equipment. Other applications than the above mentioned are in the responsibility of the user.
- For cable to cable connections a suitable cable clamp has to be used.
- The indicated dimensions with the panel cut-outs represent reference values and are in the concrete application with products to be co-ordinated.
- The sealing area of the housing has to be level and free of burrs.
- Housings in accordance with DIN EN 175 301 - 801 (DIN 43 652) .

## heavy|mate® Twin Housings Series F | Characteristics

General Characteristics	Standard	Value
Entry		M32 x 1.5 top entry
Protection class housing		IP65
Number of modules		2
Number of contacts		1 x PE
Wire Gauge		0.5 - 6 mm <sup>2</sup> (AWG 20-10)
Locking system		locking levers
Climatical Characteristics		
Temperature range		- 40 °C / + 125 °C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥ 500 mating cycles
Materials		
Housings		Zinc die cast alloy
Colour housings		grey
Rubber gasket		HNBR
Surface		nickel plated

## Panel cut out for bulkhead mounting

A high-speed train, primarily red and grey, is shown from a low angle on a track. The train is moving towards the right. The background features a steep, green hillside with a small white building, a blue lake, and rolling green hills under a clear blue sky. Power lines are visible overhead. A semi-transparent white box with a red gradient at the bottom contains the text.

A photograph of a red electrical cabinet in a field with a wind turbine in the background. The cabinet is a heavy-duty metal enclosure with a red finish. It has a door on the right side with a handle and a warning sign. The background shows a clear blue sky and a green field with a white wind turbine.

# heavy | mate<sup>®</sup> Housings

- EMC-Housings

**General information**

- conductive surface
- standard locking levers
- same housing dimensions like standard housings
- two housing sizes
- with or without ground strap
- high attenuation
- protection class IP65
- mating cycles > 500

**Concept**

**Range of housings in two housing sizes**

Version A Standard flange without ground strap	Version B Standard flange with ground strap	Version C Centering flange with ground strap

General Characteristics	Standard	Value
Protection class housing		IP65
Locking system		2 locking levers
Climatical Characteristics		
Climatic category	IEC 60068-1	40 / 125 / 21
Temperature range	IEC 60068-1	- 40 °C / + 125 °C

# heavy | mate<sup>®</sup> Housings

- Corrosion resistant Housings

## heavy|mate® Housings corrosion resistant Characteristics + Notes

General Characteristics	Standard	Value
Protection class housing		IP65
Locking system		2 locking levers
Salt mist resistance	IEC 60512-11-6:2002	>500h
Climatical Characteristics		
Climatic category	IEC 60068-1	40 / 125 / 21
Temperature range	IEC 60068-1	- 40 °C / + 125 °C
Upper temperature	IEC 60512-11-9	+ 125 °C
Lower temperature	IEC 60512-11-10	- 40 °C
Mechanical Characteristics		
Mechanical operation	IEC 60512-9-1	≥ 500 mating cycles
Materials		
Housings		Aluminium die cast alloy
Colour housings		grey – similar to RAL 9005
Rubber gasket		NBR
Locking lever		steel / special coated
Surface		conducting special surface

### General information

500h salt mist resistance can be achieved when using a plastic cable gland.

When a metal cable gland is required, we recommend to use additionally our special studs on the hoods to achieve this value.

Order codes are:

[N16 025 0112 5X](#) Metal stud M25 corrosion resistant

[N16 032 0112 5X](#) Metal stud M32 corrosion resistant

[N16 040 0112 5X](#) Metal stud M40 corrosion resistant

## heavy|mate® Accessories Wallbushing universal port

General Characteristics	Standard	Value
Number of contacts		1
Termination technique		crimp
Wire gauge		10 - 25 mm <sup>2</sup> (Radsok)
Termination technique ( wall and cable lug)		screw
Wall thickness		1.5 - 6 mm
Dimensions of wall cutout		Ø 31.5 mm ± 0.2 gratfrei
Torque when mounting the WBC		6Nm ± 3%
Mechanical and Electrical Characteristics		
Protection class (side wall to side wall)	IEC 60 529	IP67
Protection class (Radsokseite)	IEC 60 529	IP20
Rated voltage	IEC 61140 cl. 6	≤ 60V DC / ≤ 25V AC
Contact resistance	IEC 60512; test 1	≤ 0,2 mOhm
Climatical Characteristics		
Upper temperature	IEC 60512-11-9	+125°C
Lower temperature	IEC 60512-11-10	-40°C

Curve	Wire gauge
a	10 mm <sup>2</sup>
b	16 mm <sup>2</sup>
c	25 mm <sup>2</sup>

### Pluggable equipotential bonding with Wallbushing universal port

The Wallbushing universal port is a pluggable grounding system. Based on the two patented Wallbushing and Radsok technologies, the Wallbushing universal port enables a practical equipotential bonding, which need not be time consuming hardwired. For this purpose, only standard tools are needed, even for the most one-sided montage. The click |fit technology is furthermore vibration-proofed and VDE approved as a grounding connection.

**Assembly instructions for metric clamp**

- The cable jacket should be removed as far as the underside of the cable clamping; the wire netting is then to be cut down a little further and subsequently must be formed into a circular rim. The protective jacket can remain attached to the cable provided that it passes through the lower opening of the clamp.
- On assembly, while screwing the cable clamp, the circular rim has to be pushed through and pressed on the fins commutator on the base of the underside and settle into a depression. By doing this the EMC security will remain.

**General technical information**

- The Safty of connectors/connectors with braking capacity (CBC) depends on the right selection of products, the correct installation and a proper assembly.
- Decisions for the application of connectors are the requirements of the equipment specifications. This is especially the case for the definition of the rated voltage and the related clearances and creepage distances.
- All rated data for the connectors listed in this catalogue is based on overvoltage category III and pollution degree 3 (machine tool application).
- All technical data is specified for connectors, which are not under load when mated or disconnected. If in special cases connectors can be used in the sense of plug and socket devices (connector with breaking capacity), this is mentioned in the brief information of the particular section.
- Correct mounting will protect against electrical shock when mating the connectors.
- It connectors are mounted in non conductive housings both protective earthing terminals shall be mounted.
- A detailed connector glossary can be found at the end of this catalogue.
- All mentioned excerpts of standards are for general information only. For specific cases the valid original standards have to be consulted.
- Test methods acc. IEC 60512 comply with test methods acc. DIN EN 60512 or DIN IEC 60512. IEC 60664-1 complies with DIN VDE 0110-1

**Termination methods: Screw connection**

Screw clamps are designed acc. to EN 60999-1/VDE 0609. Chart 1 below shows the screw size depending on wire size and the required clamping and testing torque.

**Chart 1**

<b>Wire size (mm<sup>2</sup>)</b>	1	1.5	2.5	4	6	10
<b>Screw size</b>	M 2.6	M 3	M 3	M 3.5	M 4	M 4
<b>Test torque (Ncm)</b>	40	50	50	80	120	120

Diagram 1 below shows the range of tensile strength for a screw connection with a clamp screw M3, fastened with a torque of 50 Ncm, depending on the wire size.

**Diagram 1**

Crimp connection	Chart 2: Tensile strength for crimp connetions		
<p>A crimp connection is a non-detachable electrical connection between a wire and a crimp contact produced with the crimp technology. Precise crimping dies are matched to the crimp barrel and the wire size and a defined deformation results in a reliable electrical connection. There are open barrels (stamped contacts) and closed crimp barrels (turned contacts).</p> <p>The main advantages of crimp connections are:</p> <ul style="list-style-type: none"> <li>• Efficient termination of contacts.</li> <li>• Reproduceable electrical and mechanical figures by a constant crimp quality. (A detailed description of the crimp technology can be found in our catalogue "tools").</li> </ul> <p>The requirements for crimp connections are defined in DIN EN 60352-2.</p> <p>An important point for the quality of a crimp connection is the achieved tensile strength of the termination. Measuring the tensile strength is a practible means for quality control purposes. Chart 2 below shows the required minimum tensile strength for open and closed barrels according to the wire size.</p>	Wire size		Tensile strength

**Cross reference AWG - mm<sup>2</sup>**

The chart below allows a cross reference between American Wire Gauge (AWG) and metric wire sizes (mm<sup>2</sup>).

Chart 3							
AWG	Wire composition	Leiter-Ø	Wire size	AWG	Wire composition	Leiter-Ø	Wire size
30	1 x 0.25	0.25 mm	0.05 mm <sup>2</sup>	20	1 x 0.81	0.81 mm	0.52 mm <sup>2</sup>
	7 x 0.10	0.36 mm	0.06 mm <sup>2</sup>		7 x 0.32	0.97 mm	0.56 mm <sup>2</sup>
28	1 x 0.32	0.32 mm	0.08 mm <sup>2</sup>	18	19 x 0.20	1.02 mm	0.62 mm <sup>2</sup>
	7 x 0.13	0.38 mm	0.09 mm <sup>2</sup>		1 x 1.02	1.02 mm	0.79 mm <sup>2</sup>
26	1 x 0.40	0.40 mm	0.13 mm <sup>2</sup>	16	19 x 0.25	1.27 mm	0.96 mm <sup>2</sup>
	7 x 0.16	0.48 mm	0.14 mm <sup>2</sup>		19 x 0.29	1.44 mm	1.23 mm <sup>2</sup>
24	19 x 0.10	0.51 mm	0.15 mm <sup>2</sup>	14	19 x 0.36	1.80 mm	1.95 mm <sup>2</sup>
	1 x 0.51	0.51 mm	0.21 mm <sup>2</sup>		12	19 x 0.46	2.29 mm
22	7 x 0.20	0.61 mm	0.23 mm <sup>2</sup>	10	37 x 0.40	3.10 mm	4.60 mm <sup>2</sup>
	19 x 0.13	0.64 mm	0.24 mm <sup>2</sup>		8	133 x 0.29	4.0 mm
22	1 x 0.64	0.64 mm	0.33 mm <sup>2</sup>	6	133 x 0.36	5.5 mm	13.5 mm <sup>2</sup>
	7 x 0.25	0.76 mm	0.36 mm <sup>2</sup>				
	19 x 0.16	0.81 mm	0.38 mm <sup>2</sup>				

It has to be noted that wires of the same AWG number but with different composition have slightly different mm<sup>2</sup>.

**Chart 4: Composition and Dimensions of Copper Wires**

Wire Size	Wire Composition	Wire diameter
0.09 mm <sup>2</sup>	12 x 0.10	0.48 mm
0.14 mm <sup>2</sup>	18 x 0.10	0.50 mm
0.25 mm <sup>2</sup>	14 x 0.15	0.70 mm
0.34 mm <sup>2</sup>	7 x 0.25	0.78 mm
0.5 mm <sup>2</sup>	16 x 0.20	1.0 mm
0.75 mm <sup>2</sup>	24 x 0.20	1.2 mm
1.0 mm <sup>2</sup>	32 x 0.20	1.4 mm
1.5 mm <sup>2</sup>	30 x 0.25	1.6 mm
2.5 mm <sup>2</sup>	35 x 0.30	2.2 mm
4.0 mm <sup>2</sup>	56 x 0.30	2.8 mm
6.0 mm <sup>2</sup>	19 x 0.64	3.4 mm
10 mm <sup>2</sup>	19 x 0.80	4.3 mm

**Current carrying capacity**

The current carrying capacity of a connector is shown by a derating curve. The curve shows the currents that the connector can carry continuously and simultaneously through all its contacts. The curve is determined by testing following the standard DIN EN 60512. The upper temperature is limited by the contact and insulation material used. The sum of the ambient temperature and the temperature created by the current flow may not exceed the upper temperature. This means that the current carrying capacity has no fixed value but decreases with increasing ambient temperatures.

As a general example it can be said that a given connector which can carry 16A through all its contacts at 40°C ambient temperature can carry less, e.g. 12A, at an ambient temperature of 80°C. On the other hand it is often the case that not all contacts carry the whole rated current, which means that some single contacts may carry a higher current than that according to the derating curve. These currents have to be defined by testing.

**Diagram 3: Typical derating curve**

**Chart 5: Current carrying capacity of copper wires in (A)**

Installation type	Wire size (mm <sup>2</sup> )	0.25	0.34	0.5	0.75	1	1.5	2.5	4	6	10
 B1 Wires in conduits and installation channels		-	-	-	7.6	10.4	13.5	18.3	25	32	44
 B2 Cables and conductors in conduits or installation channels		-	-	-	-	9.6	12	16.5	23	29	40
 C Cables and conductors along walls		4.0	5.0	7.1	9.1	11.7	15.2	21	28	36	50
 E Cables and conductors on plank		4.0	5.0	7.1	9.1	11.5	16.1	22	30	37	52

Description according to DIN EN 60204 for PVC insulated copper wires with a working temperature of +40C. For other requirements,

such as for other temperatures, mountings, or wires corresponding correction factors are used (see next page).

Reduction values	Chart 6	
<p>The values in chart 5 are based on an ambient temperature of 40 °C. For other ambient temperatures the values have to be adjusted using the correction values of chart 6 below.</p> <p>For installations with many cables and conductors under load the current carrying capacity is reduced according to the two following charts 7 and 8.</p>	Ambient temperature (°C)	Correction value
	30	1.15
	35	1.03
	40	1.00
	45	0.91
	50	0.82
	55	0.71
	60	0.58

Chart 7: Reduction values for accumulated conductors				
Installation type	Number of cables and conductors / pairs under load			
	2	4	6	9
Threephase cable and conductor				
B1 and B2	0.80	0.85	0.87	0.86
C	0.65	0.75	0.78	0.76
E-one row	0.57	0.72	0.75	0.72
E-multi row	0.50	0.70	0.73	0.88
DC conductor (pair), independent of installation type	1.0	0.76	0.64	0.43

Chart 8: Reduction values for multicore cable and conductors up to 10mm²		
Number of conductors (pairs) under load	AC (conductor > 1 mm²)	DC (Pairs 0,2 to 0,75 mm²)
5	0.75	0.52
7	0.65	0.45
10	0.55	0.39
24	0.40	0.27

Conductors of control circuits generally do not need a reduction.

Impulse current carrying capacity	
<p>A surge can happen to a connector and its contacts by an impulse current, e.g. through a short circuit in the system or by switching operations. The short-timed high current heat cannot be transferred outside fast enough so the contacts are stressed by the high temperature which in the worst case can lead to a local weld.</p>	<p>The robust design of our connectors prevents most damage by impulse currents.</p> <p>The diagram 4 below can be used as a guideline.</p>

Chart 4: Impulse current carrying capacity of single contacts

Curve No.	Connector style	Curve No.	Connector style
1	heavy mate® E or A with screw contact	3	heavy mate® S with stamped crimp contact
2	heavy mate® E with stamped crimp contact	4	heavy mate® D with stamped crimp contact

**Voltage grading of connectors**

**General**

Clearances and creepage distances are the base for voltage grading of connectors. Valuation and dimensioning of clearances and creepage distances have changed since the introduction of insulation coordination.

Insulation coordination comprises the selection of the electrical insulation performances of the equipment, taking into account the expected use and its environment.

The following standards apply for this:

IEC 60664-1/10.92  
Insulation coordination for equipment within low-voltage systems

DIN VDE 0110-1/4.97  
Isolationskoordination für elektrische Betriebsmittel in Niederspannungsanlagen

**Clearances**

The clearance is the shortest distance in air between two conductive parts. An important point for the dimensioning of clearances is the determination of the overvoltage category. The above standard specifies the possible overvoltages into the four following categories:

**Overvoltage category I**

Equipment intended for the use in appliances or parts of installations in which no overvoltage can occur.  
Examples are low-voltage equipments.

**Overvoltage category II**

Equipment intended for the use in installations or parts of it in which lightning overvoltages do not need to be considered, but switching overvoltages generated by the equipment do need to be considered.  
Examples are household appliances.

Once the overvoltage category has been defined the rated impulse withstand voltage can be selected for the equipment based on the nominal voltage of the supply system and the overvoltage category using chart 9 below:

**Overvoltage category III**

Equipment intended for the use in installations or parts of it in which lightning overvoltages do not need to be considered, however switching overvoltages generated by the equipment, and for cases where the reliability and the availability of the equipment or its dependent circuits are subject to special requirements.  
Examples are protecting means, switches and sockets.

**Overvoltage category IV**

Equipment intended for the use in installations or parts of it in which lightning overvoltage has to be considered.  
Examples are electricity meters, overcurrent protection switches.

**Chart 9**

Nominal voltage of the supply system in V (based on IEC 60038)	Rated impulse voltage in kV for overvoltage category			
	IV	III	II	I
Three phase systems	IV	III	II	I
230/400 277/480	6	4	2,5	1,5
400/690	8	6	4	2,5
1000	12	8	6	4

After the rated impulse withstand voltage has been selected the pollution degree must be defined taking the expected pollution around the equipment into account.

The following four degrees of pollution are established:

**Pollution degree 1**

No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

**Pollution degree 2**

Only non-conductive pollution occurs except occasionally a temporary conductivity caused by condensation is to be expected.

**Pollution degree 3**

Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.

**Pollution degree 4**

The pollution generates persistent conductivity caused by conductive dust or by rain or snow.

It has to be noted that for a connector or plug and socket device with a degree of protection of min. IP54 the parts inside the enclosure may be dimensioned for a lower pollution degree. This also applies to mated connectors which enclosure is ensured through the connector housing and which may only be disengaged for test and maintenance purposes.

When impulse withstand voltage and the pollution degree are defined the minimum clearances can be selected from chart 10.

Chart 10

Impulse withstand voltage in kV	Minimum clearances in air in mm up to 2000 m above sea level							
	Case A (non homogeneous field)				Case B (homogeneous field)			
	Pollution degree				Pollution degree			
	1	2	3	4	1	2	3	4
0.33	0.01	0.2	0.8	1.6	0.01	0.2	0.8	1.6
0.40	0.02				0.02			
0.50	0.04				0.04			
0.60	0.06				0.06			
0.80	0.10				0.1			
1.0	0.15				0.15			
1.2	0.25	0.25			0.2			
1.5	0.5				0.3			
2.0	1.0	1.0	1.0		0.45	0.45		
2.5	1.5	1.5			0.6	0.6		
3.0	2	2	2	2	0.8	0.8		
4.0	3	3	3	3	1.2	1,2		
5.0	4	4	4	4	1.5	1.5	1.5	
6.0	5.5	5.5	5.5	5.5	2	2	2	
8.0	8	8	8	8	3	3	3	3
10	11	11	11	11	3.5	3.5	3.5	3.5
12	14	14	14	14	4.5	4.5	4.5	4.5
15	18	18	18	18	5.5	5.5	5.5	5.5
20	25	25	25	25	8	8	8	8
25	33	33	33	33	10	10	10	10
30	40	40	40	40	12.5	12.5	12.5	12,5
40	60	60	60	60	17	17	17	17
50	75	75	75	75	22	22	22	22
60	90	90	90	90	27	27	27	27
80	130	130	130	130	35	35	35	35
100	170	170	170	170	45	45	45	45

When defining the minimum clearances for connectors generally the values of the inhomogeneous field can be chosen or the required clearance has to be defined by a voltage test.

**Creepage distances**

The creepage distance is the shortest distance along the surface of the insulating material between two conductive parts. For the dimensioning of the creepage distance the following factors are taken into account: the rated voltage, the pollution degree and the tracking formation of the insulating material.

The materials are separated into four groups according to their CTI values (Comparative Tracking Index):

- Material group I 600 ≤ CTI
- Material group II 400 ≤ CTI < 600
- Material group IIIa 175 ≤ CTI < 400
- Material group IIIb 100 ≤ CTI < 175

The minimum creepage distances can be selected from chart 11 .

Chart 11

U-eff Rated vol- tage U in V	Min. creepage distance in mm																	
	Printed circuits			Other devices														
	Pollution degree		Pollution degree 1					Pollution degree 2				Pollution degree 3			Pollution degree 4

10000			40	50	71	100		125	140	160		200	250	320				

Connectors in this catalogue are allocated to fixed rated voltages which apply to the machine building industry. In case of other applications the above chart can be used to determine other rated voltages.

**Degree of protection**

Electrical connector devices have to be protected for safety reasons from outside influences like dust, foreign objects, direct contact, moisture and water. This protection is provided on industrial connectors by the housing latching devices and sealed cable entries. The degree of protection depends on the type of intended use. The standard IEC 60529 and/or DIN EN 60529 has specified the degree of protection and divided them into several classes.

The degree of protection is indicated in the following way: IP65  
 Code letters (Internat. Protection) \_\_\_\_\_  
 1st charact. numeral (degree of protection against access to hazardous parts and against solid foreign objects)  
 2nd charact. numeral (degree of protection against ingress of water)  
 The following charts 12 an13 give an overview about all protection degrees.

Chart 12			Chart 13		
1st charact. numeral	Brief description	Definition	2nd charact. numeral	Brief description	Definition
0	Non-protected	—	0	Non-protected	—
1	Protected against access to hazardous parts with the back of a hand. Protected against solid foreign objects of $\geq 50\text{mm } \varnothing$ .	The probe, sphere of 50mm $\varnothing$ , shall not fully penetrate and shall have adequate clearance from hazardous parts.	1	Protected against vertically falling water drops	Vertically falling drops shall have no harmful effects.
2	Protected against access to hazardous parts with a finger. Protected against solid foreign objects of $\geq 12,5\text{mm } \varnothing$ .	The jointed test finger of 12mm $\varnothing$ , 80mm length, shall have adequate clearance from hazardous parts. The probe, sphere of 12,5mm $\varnothing$ , shall not fully penetrate.	2	Protected against vertically falling water drops when enclosure tilted up to 15°	Vertically falling drops shall have no harmful effects when the enclosure is tilted at any angle up to 15° .
3	Protected against access to hazardous parts with a tool. Protected against solid foreign objects of $\geq 2,5\text{mm } \varnothing$ .	The probe of 2,5mm $\varnothing$ shall not penetrate at all.	3	Protected against spraying water	Water sprayed at any angle up to 60° shall have no harmful effects.
4	Protected against access to hazardous parts with a wire. Protected against solid foreign objects of $\geq 1\text{mm } \varnothing$ .	The probe of 1mm $\varnothing$ shall not penetrate at all.	4	Protected against splashing water	Water splashed against the enclosure from any direction shall have no harmful effects.
5	Protected against access to hazardous parts with a wire. Dust-protected.	The probe of 1mm $\varnothing$ shall not penetrate. Intrusion of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the device or to impair safety.	5	Protected against water jets	Water projected in jets against the enclosure from any direction shall have no harmful effects.
6	Protected against access to hazardous parts with a wire. Dust-tight.	The probe of 1mm $\varnothing$ shall not penetrate. No intrusion of dust.	6	Protected against powerful water jets	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects.
			7	Protected against the effects of temporary immersion in water	Intrusion of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water for 30 min. in 1m depth.
			8	Protected against the effects of continuous immersion in water	Intrusion of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions which shall be agreed between manufacturer and user but which are more severe than for numeral 7.
			9K <sup>1)</sup>	Protected against water during high pressure/steam jet cleaning	Water projected in powerful jets with high pressure and heat against the enclosure from any direction shall have no harmful effects.

**Cable**

For the termination of all Amphenol-industrial connectors we recommend the use of commercially available high flexible cable acc. to VDE or other local specifications. Our connectors are designed to fit these cables especially as far as number of conductors and cable diameters are concerned.

When selecting cables care must be taken that the cables do not affect (solvent) the connector or preserve an existing fire resistance.

**Sealing**

The sealing of the cable entries of all Amphenol-industrial connectors is with gland bushings. All sealings are made from Neoprene which has a good resistance against grease, oil and gasoline.

**Selection of gland bushings**

Beside glands with a fixed inside diameter which equals the number, there are also glands with variable inside diameters available (so-called onion glands). The inside diameter of these glands can be adjusted to the outside cable diameter by cutting out the smaller rings.

The selection of the appropriate gland bushing depends on the cable diameter (cable composition) can be made using the following diagram 5 (see page 273).

**Diagram 5**

<p><b>American Wire Gauge (AWG)</b></p> <p>System of numerical designations for wire sizes, based on specified ranges of cross-sectional areas. Starts with 4/0 (000) at the largest size, going to 3/0, 2/0, 1/0, 1, 2, and up to 40 and beyond for the smallest size. A step of one AWG number corresponds to a reduction of cross-sectional area of appr. 20 %.</p>	<p><b>Contact</b></p> <p>The conductive element in a connector which mates with a corresponding element to provide an electrical path.</p>
<p><b>Attenuation</b></p> <p>A reduction of power. Occurs naturally when waves travel through lines, wave guides, or media such as air or water. Is produced additionally by imperfections in electrical or optical connections (attenuation in fibre optics), e. g. contact resistance, mismatch, etc.</p>	<p><b>Contact resistance</b></p> <p>The electrical resistance of a mated set of contacts under specified conditions. Tested according to tests 2a, 2b, 2c, of IEC 60 512 -2/ DIN EN 60 512-2.</p>
<p><b>Bulkhead connector</b></p> <p>Connector designed to be inserted into a panel cutout from the rear of the panel, thus forming part of the barrier between two spaces. Back-mounted.</p>	<p><b>Contact size</b></p> <p>The designation used to differentiate one contact from another. It may be denoted by one of the following numbering systems:</p> <ul style="list-style-type: none"> <li>• numbering system: assigned numbers used to denote the size of the contact and its related conductor accommodation (e. g. in AWG units),</li> <li>• current rating system: the related current-carrying capacity is used to denote the size of the contact,</li> <li>• cross-sectional area system: reference is made to the cross-sectional area of the maximum conductor accommodation to denote the size of the contact, e. g. in mm<sup>2</sup>.</li> </ul>
<p><b>Clearance</b></p> <p>The shortest distance in air between two conductive parts, see IEC 60664.</p>	<p><b>Creepage distance</b></p> <p>The shortest distance along the surface of the insulating material between two conductive parts. The longer the distance, the less the risk of arc damage or tracking. Minimum creepage distances are specified according to the rated voltage and the applicable pollution degree and Comparative Tracking Index.</p>
<p><b>Climatic stability</b></p> <p>General term describing the behavior of components under various climatic conditions, e. g. high and low temperatures, tropical climate, high humidity, moist heat, fungus, atmospheric conditions (industrial atmosphere), reduced air pressure, etc. Climatic conditions for test purposes are explained in IEC 60068, DIN 46 040.</p>	<p><b>Crimped connection</b></p> <p>A solderless connection made by crimping. IEC 60352-2 / DIN IEC 60352 Part 2.</p>
<p><b>Connector</b></p> <p>A component which terminates conductors for the purpose of providing connection and disconnection to a suitable mating component which shall not be engaged or disengaged when live. Depending on the fastening to a cabinet, panel, rack etc. or a cable, they are classified as fixed or free connectors. A connector comprises one or more contacts and a housing which may have a separate connector insert and a separate outer housing or shell.</p>	<p><b>Derating curve</b></p> <p>The method for determining derating is specified in IEC 60 512-3. Here the combination of ambient temperature (Tu) and the current (I) leading to the same maximum allowable temperature (Tb) at the hottest point of the connector are plotted.</p>
<p><b>Connector housing</b></p> <p>The part of a connector into which the insert and the contacts are assembled. It may function as part of the locking mechanism.</p>	<p><b>DIN</b></p> <p>Deutsches Institut für Normung. A German standards organization.</p>
<p><b>Connector insert</b></p> <p>An insulating element designed to support and position contacts in a connector housing.</p>	<p><b>Electromagnetic interference (EMI)</b></p> <p>General term describing the undesirable effects of the immission or emission of radio frequency fields. In connectors electromagnetic interference is prevented by shielding. Shielded connectors normally provide means to connect the screens of attached cables.</p>
<p><b>Connector life</b></p> <p>The number of mating cycles prior to abrasion of the conductive contact surface and which does not result in a significant rise of the contact resistance. Tests according to test 9a of ICE 60512-5 / DIN EN 60512 Part 5.</p>	<p><b>Funnel entry (restricted entry C146 D series)</b></p> <p>Flared or widened entrance to a conductor barrel permitting easier insertion of the conductor.</p>

<b>Insertion or withdrawal force</b>	<b>Material group</b>
The force required to fully insert or withdraw a set of mated connectors without the effect of coupling, locking or similar devices. The insertion force is usually greater than the withdrawal force.	Classification of insulation materials according to their CTI values (CTI = Comparative Tracking Index)
<b>Insulation grip</b>	<b>Overvoltage category</b>
The area of a crimp contact that has been reshaped around the insulation of the conductor by compression during the crimping operation.	A numeral defining a transient overvoltage condition. Overvoltage categories I, II, III and IV are used.
<b>Insulation resistance</b>	<b>Connector with braking capacity (CBC)</b>
The resistance of the insulation between two conductive elements, in particular, the resistance between two contacts or between a contact and a metallic housing or shield. Tested according to test 3a of IEC 60512-2 / DIN IEC 60512 Part 2.	A component which may be engaged or disengaged in normal use, when live or under load. Note: In the sense of this document the term - live- is used if contacts are under voltage not necessarily with a current flowing across the contacts. The term - load - is used if a current is flowing across the contacts.
<b>Intermateable</b>	<b>Rated current</b>
Two connectors are intermateable when they are capable of being connected electrically and mechanically but without regard to their performance and intermountability.	A current value assigned by the manufacturer which the connector or PSD can carry continuously (without interruption) and simultaneously through all its contacts wired with the largest conductor preferably at an ambient temperature of 40 °C without the upper temperature being exceeded.
<b>Locator</b>	<b>Shield, shielding</b>
In a crimping tool the device used for positioning a crimp contact or terminal end.	Shielding of internal or external electric fields by means of a plane with a uniform electric potential, formed by metal shells or metallic layers on the inside or outside of plastic shells. The shield is normally connected to the shielding braid of the cable and/or chassis ground.
<b>Locking lever</b>	<b>Terminal block</b>
A mechanical locking device operated by actuating a lever, designed to hold two mated connectors together. Typically the lever can only be fully locked if the two connectors are correctly mated.	An assembly of terminals in a housing or body of insulating material to facilitate interconnection between multiple conductors. Also called terminal strip or barrier blocks if the terminals are separated by an insulation barrier.
<b>Mating cycle</b>	<b>Wire range</b>
One mating cycle comprises one insertion and one withdrawal operation. Term used in the definition of connector life.	The range of wire cross sections which is compatible with the dimensions the terminals of the contact (wire barrel). The wire range is expressed in mm <sup>2</sup> or in AWG numbers.
