#### Description

The Littelfuse LSP10GIHP thermally protected Surge Protective Device is a self-protected device which is specially designed to be used in outdoor and commercial LED lighting fixtures for transient overvoltage protection. It is constructed with Littelfuse thermally protected varistor technology. Its built-in thermal disconnect function provides additional protection to prevent catastrophic failure and fire hazard even under the extreme circumstances of varistor end-of-life or sustaining over voltage conditions.

The LSP10GIHP provides coordinated surge protection with more LED drivers than other SPDs due to its exceptionally low Measured Limiting Voltage (MLV) and Voltage Protection Level ( $U_p$ ). This lower clamping voltage can also help to extend the life-time of the luminaire. It also features a built-in LED indicator that notifies when replacement of the module is needed.

#### Features

#### Glossary:

1. MCOV/ $U_c$ : Maximum Continuous Operating Voltage - maximum r.m.s. voltage that could be continuously applied to the SPD.
2. Maximum Discharge Current  $I_{max}$  (A): The maximum discharge current is a measure of the SPDs maximum capability; single impulse of discharge current uses the 8/20 $\mu$ s current waveform. All Devices pass maximum discharge current with possible, safe opening of thermal disconnect.
3. Nominal Discharge Current  $I_n$  (A): The nominal discharge current is a measure of the SPDs endurance capability; 15 impulses of discharge current uses the 8/20 $\mu$ s current waveform.
4. MLV: UL1449 Measured limiting voltage; the highest value of residual voltage measurements during the application of impulses of 8/20 $\mu$ s nominal discharge current ( $I_n$ ); an average voltage value of 15 impulses.
5.  $U_p$ : IEC 61643-11 Voltage protection level; the highest value of residual voltage measurements during the application of impulses of 8/20 $\mu$ s nominal discharge current ( $I_n$ ); a rounding voltage value of maximum measurement.
