- Note:
- The required capacitors C1 and C2 (C3 and C4) must be connected as close as possible to the terminals of the module;
 - Refer to Table 1 for C1 and C2 (C3 and C4) capacitor values. For certain applications, increased values for C2 and C4 and/or tantalum or low ESR electrolytic capacitors may also be used instead;
 - When using configurations as shown in figure 3, we recommended to add an inductor (LDM) with a value of up to 10μH which helps reducing mutual interference;
 - Converter cannot be used for hot swap and with output in parallel.
